Topi-CLICK® Acquires UnoDose™ Single-use Metered Dosing Applicators with Compounding Capabilities, from Reflex Medical

Woodstock (Atlanta), GA – (date) – Topi-CLICK, a TEAM Technologies company, announced its acquisition of UnoDose by Reflex Medical, a manufacturer of metered-dosing applicators that double as compounding containers, saving time by eliminating steps in preparing medications.

With UnoDose, pharmacists mix in the container which helps to fill small batch prescriptions in less time, saving on labor and simplifying the process of preparing medications for patients, offering provider efficiency while enhancing patient ease of use. The UnoDose applicator features an innovative mechanical drive system that enables fast priming and precise dispensing. Its threaded barrel accepts mixing lids of most electronic mortar and pestle systems, allowing cream and medicament to be mixed within the applicator while its audible, tactile and visual metered dose indicators aid in accurate dosing.

According to Tim Phipps, President of the Topi-CLICK | TEAM Technologies Pharmaceutical Delivery Devices' division, "I'm pleased to welcome the UnoDose™ metered dosing applicator line to the innovative Topi-CLICK product family. Adding a dispenser that allows mixing in the same container provides a great option for compounded topicals. With over 18 years of industry leadership, Topi-CLICK remains committed to delivering innovative, efficient solutions for pharmacies. Stay tuned—more breakthrough technologies are on the near horizon."

"UnoDose has earned strong market appeal by offering enhanced mixing efficiency for compounding pharmacies while maintaining the same ease-of-use that patients appreciate in the Topi-CLICK system. The UnoDose line is a natural complement to the Topi-CLICK family of

metered dosing applicators, and both are proudly manufactured in the U.S.A. We're proud to pass the stewardship of UnoDose to Topi-CLICK. We are confident that their commitment to innovation will further expand and elevate the market", said Kevin Fuller, Reflex Medical's Founder & CEO.

UnoDose offers the Following Benefits to Providers:

- In-container machine compounding with no transfer required
- Multiple dispensing ports for fast dispensing
- Fast prime feature quickly removes air with no repetitive motion, saving time
- Open, screw-free chamber for easy filling
- Disposable mixing paddles for fast cleanup and reduced risk of contamination

UnoDose Product Specifications Include:

- Dose size: 0.25 milliliters per quarter turn (click) of dosing cap
- Maximum usable volume: 42 milliliters
- Residual volume: 1.5 milliliters
- Dimensions: 4.23" x 1.87"
- Medicament contacting materials: polyolefins free of phthalates and bisphenol A (BPA)
- UV protection: UV-inhibiting materials used for the medicament container
- Listed as an FDA Class I medical device
- Patented design

About Topi-CLICK

Topi-CLICK by TEAM Technologies manufactures topical metered dosing applicators for human and veterinary patients that are accurate, easy-to-use and reliable. Since launching the revolutionary topical applicator in 2007, Topi-CLICK has continued to be a pacesetter in the healthcare industry, providing solutions for efficient and accurate dosing. Patients, doctors and compounding pharmacists have come to rely on Topi-CLICK dosing applicators for their patients and customers. For more information, visit www.Topi-CLICK.com.
